

The M`eggbot is the most compact and most affordable solution for the automatic palletisation of eggs. A unique concept that is suitable for common farm packer types and plastic trays and pallets (ECS/Ovologic compatible). The capacity allows farmers to save a lot of time and makes the work much easier.

M`eggbot

M`eggbot

Integrated Storage for Dividers

The M`eggbot has an integrated storage for a maximum of 16 dividers. The storage is filled automatically by placing a pallet with dividers in the M`eggbot. During the palletisation process, the M`eggbot automatically places the trays and dividers on the pallet.

Auto-scan Function

The M`eggbot is equipped with sensors that continuously scans the pallet. Farmers having different eggs types are also able to place an partly loaded pallet into the machine. The M`eggbot automatically scans the pallet situation and continues to palletise.

CE Mark for reliable Egg processing

The high quality components make the M`eggbot the most suitable machine for high quality and reliable egg palletising. The compact gripper loads 4 stacks of trays on the pallet in one cycle. User friendly interface via Touch Screen. Integrated safety light curtains ensure safety when accessing the work area.

M`eggbot for stacking 5 or 6 layers

The M`eggbot is available in two heights. Type 5h is able to stack 5 layers on a pallet, type 6h is able to stack 5 or 6 layers on a pallet.

Intuitive Touch Screen User Interface

Power 230V / no compressed Air required

12-16 Dividers depending on Ceiling Height

Compact Gripper for Egg Handling controlled by Sensors
